Sajjan Mishra

0401 096 094 | sajjanm01@gmail.com | linkedin.com/in/sajjanmishra | Melbourne Australia

Full-stack & Cloud engineer with 7+ years of experience building event-driven, cloud-native platforms across logistics, insurance, government and finance domains. Passionate about designing resilient microservices and data-driven automation solutions on AWS.

Professional Experience

Sky Ledge – Software Engineer | Melbourne, VIC | Jun 2023 – Present

Angular 20 | NgRx | RxJs | Python | Java | Spring Boot | AWS (Lambda, S3, SQS, EC2, ECS, Fargate, Chalice) | MongoDB | Postgres | PostGIS | Pydantic | MJML | Slack API | Unit Testing | CSS

Sky Ledge is a business intelligence platform for asset tracking and automation. I'm part of the core platform team delivering scalable, event-driven systems for platform, fleet telemetry, fuel processing and anomaly detection, and operational control.

- Built AWS Lambda microservices for global fuel station integration service, using FastAPI, Postgres (RDS) and alembic, deployed via SAM and Pulumi.
- Engineered fleet tracking features solutions including dual tank fuel systems, TPMS ingestions, inactive asset report, and border control alerts with automated notifications to Slack or SMS via Twilio.
- Refactored frontend architecture and added new features using NgRx and RxJs, improving maintainability, UX and reducing UI bugs.
- Delivered the Email Digest system using event-driven architecture on AWS (Event trigger → SQS → Lambda / DLQ → sending emails), automating weekly fleet performance insights across tenant's asset type and respective usages.
- Implemented branch-based conditional deployments, ensuring CI/CD stability across the environments.
- Architected a domain-driven, event-driven framework for creating and tracking operational tasks, integrating reactive streams and backend events.
- Designed a hybrid search modal integrating Google Maps and internal geospatial APIs, applying reactive streams for autocomplete and state management to handle the new place creation in Sky Ledge backend system.
- Implemented all features with comprehensive unit testing practices, ensuring reliability and reducing regression issues.

CompareTheMarket – Software Engineer | Brisbane, QLD | Sep 2022 – Jun 2023

React.js | Python | Java | AWS (Lambda, S3, SQS, EC2, ECS) | Azure DevOps | Docker | Kubernetes

CompareTheMarket is Australia's leading price comparison platform. I worked on the General Insurance team, enhancing backend systems and modernizing infrastructure for Car, Home & Contents, and Travel insurance products.

- Migrated CI/CD pipelines from Bamboo to Azure DevOps, reducing deployment time by over 30%.
- Introduced Redbook vehicle data versioning, preserving historical datasets and improving compliance workflows (AWS S3 trigger → Lambda → Dynamo).
- Improved customer journey flows and API performance, contributing to higher quote conversion rates using feature flags and doing A/B testing.
- Onboarded new engineers and documented service boundaries to accelerate team integration.

Arq Group – Full Stack Developer | Brisbane, QLD | Jan 2020 – Sep 2022

Python | Angular 12 | AWS (Lambda, DynamoDB, OpenSearch, CloudWatch, SNS) | Terraform | Jenkins| JMeter | Java | Spring Boot | AngularJS | AWS (EC2, Code Pipeline, Code Build) | Bitbucket | GitHub | Elastic Search | Kibana | Kafka

Arq Group (now NCS Australia; previously Melbourne IT) delivers cloud and data solutions for enterprise clients. I led modernization efforts for government platforms and built automated reporting pipelines for retail clients.

- Rebuilt the Email Journal Store (EJS) platform for the Department of Education using Python and Angular 12, replacing long running legacy Java systems and Angular JS.
- Migrated infrastructure to AWS Lambda and OpenSearch, reducing hosting costs by ~37% and improving scalability.
- Delivered a serverless sales reporting pipeline for Minor DKL (The Coffee Club), ensuring accurate daily reports before 9 AM.
- Maintained infrastructure-as-code with Terraform, building CI/CD pipelines in Jenkins and AWS Code Pipeline, and improved system reliability through test coverage and documentation.
- Authored release documentation and rollback plans; received internal awards for initiative.

F1Soft International – Junior Software Engineer |Kathmandu, Nepal | May 2016 – May 2017

Enterprise Java Beans (EJB) | Angular JS | Postman

F1Soft International is a largest fintech company in Nepal, best known for developing digital banking solutions, payment gateways, and mobile financial platforms used across major financial institutions.

- Contributed to frontend and backend development for fintech products using AngularJS and Java EJB.
- Gained foundational experience in enterprise systems and Agile delivery.

Education

Federation University Australia
Master of Technology (Software Engineering) | 2017 – 2019

Kantipur Engineering College
Bachelor of Engineering (Computer Engineering) | 2011 – 2015

Certifications & Awards

- AWS Certified Developer – Associate.
- Internal awards at Arq Group:
  - Work with Heart: Awarded for going above and beyond in supporting clients and internal teams.
  - Smarter Together: Acknowledged for cross-functional collaboration, knowledge sharing across delivery teams and always backing up the sales team.
  - Change it Up: Acknowledged for driving innovation and leading architectural improvements in legacy system modernization.
- Golden Key International Honour Society Membership - Received formal recognition for academic excellence in software engineering coursework at FedUni (Top 15%).
